

# Kazimierz Kordylewski as a human and astronomer

12-13.10.2019

Queen Jadwiga Astronomical Observatory  
Rzepiennik Biskupi

We organise the seminar dedicated to the memory of the outstanding astronomer Kazimierz Kordylewski. He claimed the existence of the Kordylewski's clouds which are believed to be dust concentrations at the Lagrange points of the Earth-Moon system. Most recently observations seem to confirm his theory.

- The scientific aspects of this discovery, memories and facts from the life of Kazimierz Kordylewski will be reported in the lectures of our guests:

**prof Jerzy Kreiner**  
**dr Henryk Brancewicz**  
**dr Adam Michalec**  
**dr Bogdan Wszolek**  
**prof Leszek Kordylewski**  
**dr Judit Sliz-Balogh**  
**prof Gabor Horvath**

## Meeting organizers:

Astronomia Nova Society  
Astronomical Observatory of the Jagiellonian University

## Organizing committee:

Marek Jamrozy  
Leszek Kordylewski  
Agnieszka Kuźmicz  
Agnieszka Pollo  
Bogdan Wszolek  
Urszula Pajdosz-Śmierciak
